NightFly introduced the new lighting control units for big airplane models and UAVs

Last year we started with the innovation of existing control units for different models. Currently there are newly available two strongest units **NF53** and **NF54** XL size for large airplane models that are used to power LEDs with a current of 120, 350 and 700 mA, the flash of up to 1000 mA. Units include 8 independent current-powered outputs for position, flashing and landing lights and are equipped with an electronic power supply management. LEDs are connected directly without using resistance protection.

As a brand new product we developed the control unit **NF39**, which is used for lighting UAV unmanned multicopters.

NightFly introduced an innovative products in the Servo accessories

The both new units are inovated products in the servo accessories category and replaces previous products.

NF-INV3 is the new servo inverter for reversing the servo movement direction. It replaces the previous models INV1 and INV2. **NF-SD3** is a new servo movement speed limiter that replaces the previous models SD1 and SD2.

The brand new lighting control unit NF32 is now in Medium size category

The **NF32** is a new control unit for lighting medium-sized model aircrafts with a wingspan up to 1.3 meters. The unit has the five outputs for LEDs with rated current of 80 mA. Two are designed for position lights (**P1**, **P2**), two for flashing lights (**F1**, **F2**) and one for landing light (**L1**). The sixth output (**L2**) is designed to power the stronger main landing light. In our offer there are two versions of this unit. The reflectors with unit **NF32A** can be fitted with LED lights 80 or 120 mA. The version **NF32B** is designed for reflectors 120 or 350 mA.

The innovative control unit NF3E is available in the Large size category

The **NF3E** is an innovative product that replaces the previous products NF-3E and NF3X-350. It is newly equipped with and electronic switch that can automatically disconnect the unit from the power supply when the receiver is switched off. This function can be deactivated by inserting a black jumper SW, then the unit acts as the original NF-3E.

NightFly introduced the new control unit NF-M for simulation of missiles firing

The control unit **NF-M** is designed to simulate firing up to 15 shots. Missiles can be fired individually or in batches. For the simulation LED 350 or 700 mA can be used. Double output allows to use simulation on both right and left wing. The new product is available in the category Special effects.
